

Main Themes

The ideas cover various topics related to Conga Orchestrate, including:

- Enhancements to existing features like email templates, clause search, and step editing
- Requests for new capabilities such as using queues for email recipients, cloning steps with child steps, and mapping custom fields
- Bug fixes and improvements to address issues with step validation, task record querying, and more
- Usability suggestions to streamline processes and boost efficiency

Top 3 Ideas by Votes

1. "Ability to use Lightning Email Template Folders in Orchestrate" (3 votes)
2. "Orchestrate Error Handling: Task is completed even though the document generation step is failed." (2 votes)
3. "Ability to customize the clause search result view" (2 votes)

Comment Sentiment Analysis

The overall sentiment of the comments is neutral to slightly positive. Most comments are either providing additional context, thanking the idea submitter, or indicating that the idea will be considered for future implementation. There are no overly negative or toxic comments present.

Insights and Trends

- Many ideas focus on enhancing existing Orchestrate features to improve usability and efficiency
- There is a notable demand for more flexibility in email-related functionality, such as using queues and customizing templates
- Several ideas highlight the need for better integration between Orchestrate and native Salesforce features like Lightning, Process Builder, and Flow
- Customers are actively submitting bug reports and enhancement requests, demonstrating their engagement with the Conga platform
