

Overview of Main Themes

The ideas cover a variety of topics related to Conga Batch and Composer functionality, including:

- Enhancements to scheduling options and frequencies
- Improvements to document output and consolidation settings
- Ability to retrieve and include images from various sources
- Notifications for batch/trigger failures
- Reporting capabilities for API usage and batch transactions
- Support for external users and additional file formats
- Increasing record limits for batches

Top 3 Ideas by Vote Count

1. 'Ability for Composer API to retrieve private images (base64 strings)' (3 votes)
2. 'Ability for user to be notified upon Batch and/or Trigger failures' (3 votes)
3. 'A way to include plus signs in hard coded emails.' (2 votes) 'Conga Batch/List View L' (2 votes) 'Conga Batch - Wanted to have default unchecked box to Consolidate Word or PDF output into a single file' (2 votes)

Sentiment Analysis of Comments

The overall sentiment of the comments is neutral to slightly positive. Most comments are from Conga employees acknowledging the ideas and providing status updates like moving them to 'future consideration' or 'deferred'. A few comments provide additional context or workarounds. There are no strong negative sentiments expressed.

Notable Patterns and Insights

- There are multiple ideas related to enhancements in scheduling batches and receiving failure notifications, indicating these may be common customer pain points.
- Retrieving images from various sources for document merging seems to be another area customers are looking for more flexibility and options in.
- Several ideas mention increasing record/file size limits, suggesting some customers are running into limitations with high volume use cases.
- Interest in more granular reporting, both for API usage and batch transactions, comes up in a few ideas.
